Combination of parts
compositional semantics: the whole is a function of its parts
Chunking (orthogonal)
stores a composite as a unit
Blending
parts not recoverable
Superposition
recoverable only if regions disjoint
Role-filler
parts recoverable
summed scores of composable diffusion
tensor products; slots and templates
Symmetric
x + y, x ⊙ y
Head-modifier
αx + βy; prototypes
Conceptual
map, then merge
Compositional behavior at most: systematicity and productivity are contingent
Representational: necessary
